Lam Probe Aftercare

- After treatment with the Lam Probe the treated area may feel irritated and warm. Redness and scabbing may form.
- If your practitioner has bandaged/covered the area leave dry and covered for 24 hours.
- Make sure you do not pick at any scabs that do form as doing so may cause hyper pigmentation or scarring.
- If the treated area is still irritated or warm later that night and the following day apply cold aloe vera/witch hazel or savlon cream.
- Keep the area dry during the daytime after irritation has stopped.
- You must use an SPF to protect your treated area for at least 4 weeks following treatment. We advise all year round in most cases (seek practitioner advice).
- Avoid direct sunlight, especially in peak hours.
- When cleansing please avoid products with alcohol.
- Pat the area dry after cleansing with a clean towel do not rub as this can remove scabs and cause scarring.
- Do not use any bleaching or peeling products for at least 21 days..
